About Me

I have about 6 months of work experience in web programming through studying and doing practical projects. I have knowledge of HTML, CSS, Javascript, Vue, PHP, OOP, MYSQL, Laravel.

Experience working with git on projects, experience handling code conflicts and some git-related issues.

I have the ability to work independently or in groups, as well as read and understand documents and search for new information.

I am highly focused on work, highly responsible, self-motivated and self-disciplined. Willing to learn and apply new technology.

Familiar and working with tools: Slack, Trello, Zoom, Email,...

Target

I have set a goal to become a Fullstack Developer.

To become a Fullstack Developer, I also set myself a few skills that need to be perfected in the next 1 to 2 years: Use and access many new languages, update yourself every day, project progress management,...

I really want to be able to work in a professional environment like my company, to be able to complete projects at the company, as well as cultivate more experience for myself.

Good at languages programming

PHP

Javascript

HTML/CSS

MySQL

Good at Frameworks/CMSs

Laravel

Vue

Bootstrap

Good at the tools

VSCode

Slack

Github

Work experience

Personal project

- HTML/CSS/JS, PHP/Laravel, MySQL

01/2023 - 03/2023

Project Name: Build cityshop website

Team size: 1

Project Description: I analyze and implement project functions, write routes, following the MVC model. Build an integrated interface with html/css/js, use blade templates available in laravel to divide the layout/pages of the website, use routes to navigate pages. Build a Register/Login page, profile screen, update, add, delete products, write product comments, add products to cart, checkout.

Technology used: PHP Laravel MySQL Javascript HTML/CSS
- HTML/CSS/JS, Vuejs Developer

04/2023 - 05/2023

Project Name: Build an online ordering website

Team size: 1

Project Description: I analyze and deploy project functions, estimate, and plan each sprint. Build a built-in interface with html/css/js, use slots to divide the layout/pages of the website, use routes to navigate the pages. Build Register/Login pages, profile screen, update, add, delete products. The API I am provided is written in Node js language, I use the Axios library to call the API, get data from the server and return it to the client.

Technology used: Vue RESTful API Javascript HTML/CSS
- Vuejs Developer

Project Name: Napir Website

Team size: 2

Project Description: I am the lead developer for this project, responsible for tasks such as layout design, component division, and coding. A senior developer will review the code, and I will address any issues that may arise.

Technology used: HTML/CSS SCSS Javascript Vue
- PHP/Larvel - Vuejs Developer

10/2023 - Present

Project Name: Website for Selling Courses (Updated with more functions)

Team size: 1

Project Description: During the project: I was guided by a mentor to develop additional functions from basic to advanced to improve my skills. Write a command for the function of updating course photos, synchronizing users' data -> wink_authors (wink library) to post articles when logged into your student account and just registered.

- At Teacher's Admin screen (Vuejs): Function to update courses including (course photos, slides, questions and answers,...). Build functionality to add courses, including (course photos, slides, Q&A,...). Add page management function, so that when creating a page with its own post, you can know which user created and managed it.

Library: Inertiajs, VueQuill, Elements Plus Vue3 UI Framework,

Technology used: PHP Laravel Vue MySQL Javascript HTML/CSS

Education

- STUDENT - SUNTECH ACADEMY

04/2022 - Present

Join the "Web Fullstack" class at SUNTECH. I learned about Javascript, Vue, PHP, MYSQL and Laravel Framework.

After finishing this course, I have understood the concepts in Vue and Laravel Framework. I can build websites with Laravel and Vue. And I am confident in building single web application.

I completed the final project of the course and received high praise from the teacher.

Technology used: PHP Laravel Vue MySQL Javascript HTML/CSS
- ELECTRIC POWER UNIVERSITY

2018 - 2023

During my time at school, I learned the basics of programming and learned some programming languages such as c/c++, php, html, css, js...

I have completed and successfully defended my graduation project, which is a project to build a small sales website using Laravel Framework, MySQL and jQuery.
- C BINH LUC HIGH SCHOOL

2015 - 2018

I have fond memories of the times when I studied here!

Hobbies

I like computers, things related to technology, learning new knowledge and sharing it with people who have the same passion.

I like listening to music, playing soccer, and other sports...
